To Whom It May Concern

I am pleased to recommend Arjun Tyagi, a Grade 11 student, based on his work with the Pangea Kitchen team.

Arjun implemented an AI-powered food waste reduction platform in our commercial kitchen that combined smart weighing hardware with a real-time analytics dashboard. The system gave our chefs and kitchen managers clear visibility into waste patterns across preparation and service, and introduced simple feedback mechanisms that encouraged more thoughtful planning and portioning decisions. During the pilot phase, the initiative contributed to an estimated reduction in overall food waste by nearly 20%, reflecting both improved awareness and operational adjustments.

What stood out was Arjun's ability to adapt his technology to real kitchen workflows. He worked closely with our staff, incorporated feedback, and ensured the system was practical, easy to use, and non-disruptive during busy service hours. Despite his age, he demonstrated strong technical understanding, professionalism, and a genuine interest in solving a real operational problem.

His project helped our team become more data-driven and environmentally conscious in day-to-day decision-making. Arjun approached the work with curiosity, humility, and persistence, earning the trust of our kitchen staff quickly.

I recommend Arjun Tyagi without reservation and am confident he will bring the same initiative and impact to future academic and professional environments.

Regards,
