UDMAN
HOTELS & RESORTS

To Whom It May Concern,

I am writing in support of Arjun Tyagi, a Grade 11 student, who worked with the Udman Kitchen team on a technology-driven sustainability initiative.

Arjun designed and deployed an AI-enabled system to observe and analyze food waste within our kitchen operations. Rather than focusing only on data collection, his approach emphasized understanding daily routines and identifying small, repeatable inefficiencies that often go unnoticed in a fast-paced kitchen environment. The combination of weighing hardware and live reporting helped our team reflect on preparation habits and adjust processes accordingly.

Throughout the engagement, Arjun spent time on the kitchen floor speaking with staff, observing workflows, and refining his system based on practical constraints. He showed strong judgment in keeping the technology lightweight and unobtrusive, which helped ensure consistent use by the team.

What impressed us most was Arjun's sense of responsibility and follow-through. He treated the project as a real operational deployment rather than a school exercise, documenting findings, incorporating feedback, and explaining insights clearly to non-technical stakeholders.

Arjun's work contributed to a more thoughtful and sustainability-oriented mindset within the kitchen. I recommend him with confidence and believe he will continue to approach complex problems with the same initiative and care.

Yours Sincerely,

[redacted]
